In this learning trail, you will learn about Automation Anywhere's Digital Workforce platform, it's architecture and, components. You will also learn to identify processes that make good candidates for automation and how use some of Automation Anywhere's key commands to automate business processes. Learning will be reinforced through concepts and walk through demos. By the end of this learning trail, you will be able to:

• Describe how Automation Anywhere's RPA tool can be used for creating software robots (Bots)
• Describe Automation Anywhere's Digital Workforce Platform, architecture, components and the appropriate use cases
• Use the Database command to automate database-related processes
• Use the Excel command to automate processes related to Excel Workbooks
• Use the PDF Integration command to automate PDF-related tasks
• Describe what is IQ Bot, it's key concepts, benefits and how it works with an example

• Describe the importance of Bot Insight, the two types of Analytics and how to generate the Business Analytics Dashboard to view reports
